The Alaska Agriculture Manufacturing Business Industry & Technology Program

NEW & INNOVATIVE WAYS TO ACCESS ALASKA'S ECONOMY

Incubator

AMBIT has 2500 sq. ft. of incubator space where companies can come to grow their business through the start-up phase of their development. Along with incubation, clients who request additional services can receive capital acquisition assistance and much more.

Agriculture

AMBIT has developed a state-wide agricultural training program for production level farmers that is open to anyone. Our goal is to have farmers producing crops for regional consumers all across the state.

Training

AMBIT believes that in order to have a strong class of entrepreneurs and successful business practices entrepreneurs need a healthy foundation. That healthy foundation starts with the right training to help entrepreneurs and youth discover and build upon the skills for financial and entrepreneurial success.

Research

AMBIT is engaged in multiple research projects in order to meet the economic development needs of many of the economic sectors that have the greatest potential to be successful for entrepreneurs and businesses in the state in the areas of: agriculture, manufacturing, business, industrial, and technology.

Innovation

The economic imperative of innovation, especially in small business, is one of the few areas where we are able to compete in a global market. Thus in Alaska innovation is the top priority for economic development.

Technology

Technology goes hand-in-hand with innovation, it allows the entrepreneur to develop products and services in as low a cost methodology as possible. AMBIT's goal is to provide technological access and assistance across the state of Alaska.

Outreach

There are people all across our great state with ideas and innovations that can help grow the state economy and drive their own success. AMBIT's primary mission is to assist these entrepreneurs in bringing their ideas to life.
